

**AMENDMENT TO THE CLAIMS**

The following claim set replaces all prior versions, and listings, of claims in the application:

1. (Currently Amended) A polyacetal resin composition ~~comprising~~ consisting essentially of 100 parts by weight of a polyacetal resin component (A) and 3-200 parts by weight of a glass inorganic filler (B), wherein the polyacetal resin component (A) consists of 99.9-80 parts by weight of a polyacetal resin (A1) having 0-20 mmol/kg of hydroxyl group in the molecule and 0.1-20 parts by weight of a modified polyacetal resin (A2) having 50-2,000 mmol/kg of hydroxyl group in the molecule.
2. (Original) The polyacetal resin composition according to Claim 1, wherein the polyacetal resin (A1) is a (co)polymer obtained either by homopolymerizing formaldehyde or a formaldehyde cyclic oligomer represented by the formula  $(CH_2O)_n$ , wherein n is an integer of at least 3, or by copolymerizing formaldehyde or a formaldehyde cyclic oligomer represented by the formula  $(CH_2O)_n$ , wherein n is an integer of at least 3, with a compound selected from a cyclic ether and a cyclic formal.
3. (Original) The polyacetal resin composition according to Claim 1 or 2, wherein the modified polyacetal resin (A2) is a (co)polymer obtained either by homopolymerizing formaldehyde or a formaldehyde cyclic oligomer represented by the formula  $(CH_2O)_n$ , wherein n is an integer of at least 3, or by copolymerizing formaldehyde or a formaldehyde cyclic oligomer represented by the formula  $(CH_2O)_n$ , wherein n is an integer of at least 3, with a compound selected from a cyclic ether and a cyclic formal in the presence of a hydroxyl group-containing compound.

4. (Original) The polyacetal resin composition according to Claim 3, wherein the hydroxyl group-containing compound is selected from water or polyhydric alcohols.
5. (Original) The polyacetal resin composition according to Claim 1 or 2, wherein the glass inorganic filler (B) is at least one selected from glass fiber, glass bead, milled glass fiber and glass flake.
6. (Original) The polyacetal resin composition according to Claim 1 or 2, wherein the glass inorganic filler (B) is a filler surface-treated with at least one selected from silane coupling agents and titanate coupling agents.
7. (New) The polyacetal resin composition according to Claim 1, wherein the polyacetal resin component (A) is the only thermoplastic resin present in the composition.
8. (New) A polyacetal resin composition consisting of:  
100 parts by weight of a polyacetal resin component (A);  
3-200 parts by weight of a glass inorganic filler (B), wherein  
the polyacetal resin component (A) consists of 99.9-80 parts by weight of a  
polyacetal resin (A1) having 0-20 mmol/kg of hydroxyl group in the  
molecule and 0.1-20 parts by weight of a modified polyacetal resin (A2)  
having 50-2,000 mmol/kg of hydroxyl group in the molecule, and wherein  
the composition optionally further consists of stabilizers, additives and/or fillers  
other than the glass inorganic filler (B).
